4 NOTE: This is a 'working draft' sequence. It currently
4 consists of 36 contigs. The true order of the pieces
4 is not known and their order in this sequence record is
5 arbitrary. Gaps between the contigs are represented as
6 runs of N, but the exact sizes of the gaps are unknown
7 This record will be updated with the finished sequence
6 as soon as it is available and the accession number will
7 be preserved.

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone

gene

1568 135667: gap of 100 bp
1568 135667: contig of 21096 bp in length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone F13G11 is at 101 in this sequence. The true left end of clone Y4IE3 is at 254309 in this sequence. The true left end of clone Y5ID11 is at 286315 in this sequence. The true right end of clone Y5TG11 is at 313573 in this sequence. The start of this sequence (1. .104) overlaps with the end of sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

EXCEPTION TAILS SEQUENCE IS NOT THE ENTIRE INSERT OF CLONE Y57G11C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         jes@sanger.ac.uk or rw@nematode.wustl.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name:
                                                       The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically pinds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cancer associated antigen; diagnosis; research; treatment; human; hreact rancer; colon cancer; qastric cancer; renal cancer; lung c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The nucleotide sequence (NS) of the full-length protein-coding sequence of clones ci25.4 (AAV83132), da228.6 (AAV83133), du410_5 (AAV83134), eh80_1 (AAV83135), er369_1 (AAV83136), fh123_5 (AAV83137), fm60_1 (AAV83138) or fr473_2 (AAV83139), (all clones are deposited as ATCC 98415) and the proteins they encode are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals for example, tumour suppression/invasion activity, immune system boosting activity. The polynucleotides are also believed to be useful for gene therapy. This polynucleotide was isolated from a human for gene therapy.

The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC tre polynucleotide and for detection of transcription levels. Ribozymes CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC preventive interventions are used in pharmaceutical compositions to CC treat the cancers and proliferative disorders such as neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Align seg 1/1

The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or blochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and proventive interventions. The polynucleotides, polypeptides and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia, dysplasia and hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Williams LT,

The present invention describes colon tumour associated proteins (I) and (II) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases (I) may be used in the prevention, diagnosis and treatment of diseases (C associated with inappropriate colon tumour associated protein (TCAP) (C expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by (C rectifying mutations or deletions in a patient's genome that affect the ceactivity of TCAPs by expressing inactive proteins or to supplement to patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host (C cell culturing the cell to express the protein. (II) and its (C complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may calso be used as and an assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used (e.g., by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512 and AAM24494 to AAM24523 represent nucleotide and amino acid sequences (C capture in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-FEB-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunomodulatory; haematopoletic; chemokinetic; aurayevan; immunomodulatory; antiinflammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiparkinsonian; antiulcer; osteopathic; neuroprotective; nootropic; antipsoriatic; cerebroprotective; anticonvulsant; antidepressant; gene therapy; vaccine; autoimmune disorder; multiple sclerosis; allergic condition; insulin dependent diabetes; asthma; myeloid cell deficiency; ulcer; lymphoid cell deficiency; burn; osteoporosis; osteoarthritis; central nervous system disorder; alzheimer's disease; stroke; Parkinson's disease; Huntington's disease; coagulation disorder; haemophilia; thrombosis; inflammatory disorder; Crohn's disease; tumour; infection; depression; psoriasis; ss.
                                                                                                                                                                                                                                                                                     sequence tags (sESTs), isolated from human, mouse, chicken and rat tissue sources. The sESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antiinflammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiulcer; osteopathic; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         151
                                      nootropic; antiparkinsonian; antipsoriatic; cerebroprotective; anticonvulsant; and antidepressant. The sESTs can be used for gene therapy and in vaccines. The sESTs are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA molecules which correspond to the SESTs. Proteins encoded by the SESTs are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expressed sequence tag;

CC The invention also specifically discloses 8 human colon tumour proteins CC (AABI1897-B11904). The nucleic acids, the polypeptides they encode, and CC antigen presenting cells (APCs, preferably dendritic cells) expressing CC such polypeptides may be used in vaccines that target tumour cells, carried in the polypeptide expressing CC cancer. T-cells specific for the polypeptide expressed by the APC are CC cancer. T-cells specific for the polypeptide expressed by the APC are CC creations thereof. The sample or the isolated T-cells specific for the polypeptide can then be used to inhibit cancer development. CD4+ and/or CC CD8+ T-cells from a patient may be incubated with a polypeptide or CC close the proliferation of specific T-cells. The T-cells can be CC cloned and then administered back to the patient to inhibit can cer development. Nucleic acids encoding the polypeptides and antibodies CC against the polypeptides may be used to determine the expression level CC ancer cells are present. Such disprostic methods may also be used to intervals, and comparing the cancer by repeating the processes at time CC intervals, and comparing the cancer by repeating the processes at time CC present sequence represents a cDNA encoding a human colon time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Align seg 1/1 to: AAA77915

                                                                                                                                                                                    CC associated with inappropriate colon tumour associated protein (TCAP)

CC expression, such as colonic cancer. For example, (I) and (II) may be

CC used to treat disorders associated with decreased expression by

CC rectifying mutations or deletions in a patient's genome that affect the

CC activity of TCAPs by expressing inactive proteins or to supplement the

CC patients own production of them. Additionally, (II) may be used to

CC produce the TCAP proteins, by inserting the nucleic acids into a host

CC complementary sequences may also be used as DNA probes in diagnostic

CC complementary sequences may also be used as DNA probes in diagnostic

CC polymerase chain reaction (PCR) and hybridisation assays to detect and

CC quantitate the presence of similar nucleic acids in samples, and

CC also be used as antigens in the production of antibodies against TCAPs

CC anti-(I) antibodies and antagonists may also be used to down regulate

CC TCAP expression and activity. The anti-(I) antibodies may also be used

CC (e.g. by enzyme linked immunosorbant assay (DEAS)). AAI28400 to AAI28512
